

TQG interactive Lottery: WWW – iLottery instant win games

TQG interactive Lottery and instant win games

TQG – LTS integrates together with Pariplay their standard interface for „Instant Win Games“ in its interactive Lottery platform. Thereby, customers who use the TQG iLottery platform are now able to embed games in a great variety.

The gaming experience is fully integrated into the iLottery platform.

* There is a complete integration into the player's account (wallet), including display of the account balance in the game.

* Due to traceability there is a transaction history showing every single participation of all games.

* The player protection is fully guaranteed (i.e. monitoring of game limits and max. duration of spent time)

* Instant winnings are managed with the player's account in the TQG platform.

* There is full transparency for the player and the customer service agent.

In addition to the original games of Pariplay, the following gaming manufacturers can also be integrated:

- * NetEnt
- * Quickfire (Microgaming)
- * Betsoft
- * Evolution
- * iSoftBet

* Ezugi.

“This is another innovative step, which provides our customers even more investment protection in the future” so Marcus Frey, CEO, TQG-LTS.
